

CASTLES MP200/MP200L BUILD 54

ESTIMATED UPGRADE DURATION:

- From **Build 52**: 30-45 Min
- From **Build 53**: <5 Min

RELEASE NOTES

Fixes		
Issue	Before Build 54	After Build 54
Certain Wi-Fi Networks could not reconnect.	Device was not able to reconnect to Wi-Fi networks that used a combination of pairwise ciphers TKIP and CCMP.	Device will now recognize and reconnect to Wi-Fi networks that use a combination of pairwise ciphers TKIP and CCMP.
“Retry” option returns to Main Menu without trying to reconnect to Wi-Fi.	Device showed the “Retry” option after failing to connect to Wi-Fi, but when selected, the device returns to Main Menu without trying to reconnect.	Device will attempt to reconnect to Wi-Fi if the “Retry” option is selected after a failed attempt.
Not able to Forget or Select Wi-Fi networks with long names.	Could not select or forget Wi-Fi if the network name greater than 18 characters.	Can now select and forget Wi-Fi networks with names greater than 18 characters.
Device would enter sleep mode before returning error when attempting to connect to Wi-Fi.	If trying to connect to Wi-Fi, after 1 minute the device would enter stage-1 sleep mode (the screen would go dark, but would continue attempting to connect to Wi-Fi). Connection error was not displayed.	If trying to connect/reconnect to Wi-Fi, device will display an error before going into stage-1 sleep mode.
